Houston, TX 77034

Dear Ivo,

I just wanted to send a personal note saying thanks for your help on the vibration problem with our RT48S installed off-shore, Brazil. Your assistance was invaluable, and is very much appreciated. Your analysis of the problem was right on, and the conclusions led directly to us being able to resolve the problem. As you know, the problem had been ongoing for several months. Now the customer is delighted with the operation of the equipment.

You may feel free to cite me as a referral, should you have any client who wishes to check references. I will be happy to provide feedback on the positive experience we had. Furthermore, you may use the following quote, if you like, as a testimonial:

"It's been a pleasure working with Ivo. We brought a particularly unusual vibration problem to him for assistance. We had been trying, without success, to resolve a vibration problem in a Power Turbine installed in an off-shore compression package. Ivo conducted a thorough review of the data we brought to him, and offered his analysis and conclusions. I can say, without reservation, that this led directly to the resolution of the problem. The problem was a very low frequency component that was thought to be structural. Ivo zeroed right in on the real cause, and put us on the right track to fix the problem." - Tony Renfrow, Technical Services Representative, Rolls-Royce Energy Systems, Inc.

Thanks again, Ivo, both for hitting a home run, and for fitting our work into your schedule in such a timely fashion. I'm looking forward to working with you again.

Best Regards,

A handwritten signature in cursive script that reads "Tony Renfrow".
